2. Results Conclusion

With four columns and 15 rows in the table, from the observed results, each passenger is allotted with the best possible seatings on the flight. However, once the 60 seats have been booked up and taken, the rest of the customers are unable to be allocated with their desired seating numbers. Kristen Frost tries to book one seat and is unable to do so. Hence “ sorry, failed to assign flight seatings” This applies to the rest of the passengers as shown in the output displayed above.
